

Osaka College of Technology

Founded in 1895, Osaka College of Technology (OCT) possesses a history of 130 years. Through architecture, design and other “manufacturing” related practical education and training, we have cultivated many international talents active around the world.

With two years of professional learning, the students will acquire flexible creativity, site coping capacity and communication skills.

OCT offers five majors including architecture, architectural design, carpentry skills, interior design, robot and robot & machinery. The highlight is that in the “architecture” field, the major are subdivided according to professional emphasis as in design and equipment, providing the students with access to more in-depth knowledge.

The employment rate is very high at OCT because the students learn and acquire professional skills. Professional faculty who are active in the front lines of the industry will give job hunting instructions to match with desirable career opportunities provided by the school’s large human resource network.
